

Patent Application of Norberto Del Rio for  
"Hydrologrip Pliers" continued  
Page 9

**Claims: I claim;**

1. A device for the use of tightening or loosening objects, comprising:
  - (A) a body consisting of a pair of jaws enabling the function of tightening, loosening, and cutting of objects,
  - (B) providing a hydraulic system with means for coupling the function of said jaws,
  - (C) side body having a hole near its distal end substantially aiding the use of said hydraulic system,
  - (D) whereby all components provide the result, for which the device is used for.
